# Maximise your mobile coverage with a MultiNet SIM

Do you suffer from Mobile phone coverage black spots? Do you find you mobile works in some areas and not others? There is a solution...Mobile MultiNet. A simple solution that delivers all four UK mobile operators on one single SIM card using your existing mobile number.

## So how does it work?

The SIM Card will initially look for its "Home" network. If it finds a signal it will lock on to this network and you are ready to go. However at the point where the signal completely disappears, your mobile device/handset will automatically undertake a network search. This is actually no different to what happens with single network SIM cards however this time your SIM will search and allow you access to either EE, Vodafone, O2 or Three Mobile.

Once your mobile handset selects the best signal available it will lock to that network and away you go, simple!

## MultiNet Bundle Plans

MultiNet Tariff Plan	Price Per Month
Unlimited Voice + Text 2GB	£35.00 per month
Unlimited Voice + Text 3GB	£38.50 per month
Unlimited Voice + Text* 5GB	£42.00 per month

Calls to other UK Mobiles	12p
Voicemail	5p
Standard UK Text Message	5p per Message
PAYU UK Data per MB (non- Bolt-on)	50p

**Additional text, data and roaming SOCs available**

# FAQ

***Will the SIM work in any device or mobile handset?***

The sim card is available in all size formats (Standard, Micro and Nano) but the handset you use with it needs to be minimum 3G compatible and unlocked to all networks

***Do all makes and models of mobile handset work the same***

Some handsets perform better than others, as some will search for signal faster and more often

***Will the sim card constantly search for the strongest signal and select it?***

The sim network search is only driven by the mobile handset so no. if it has any signal on the home network it will remain on that network even if the signal is weak, the handset will only ask the sim to search if it completely loses a signal on the home network

***Can I choose which network to use if I know the home network is poor at my current location?***

Yes, you can manually search and select an alternative network for a particular location, however the Sim will after some hours revert back to its home network if there is any signal when it next updates.

***Can I get 4G data with the SIM?***

4G data is available with SoloNet and Vodafone signals currently with 3G on all four networks (4G on O2 and EE) to follow later 2016

***Will I get four separate mobile bills?***

No one single every month.

***Are there different tariffs available to suit my usage?***

Yes Comm-Tech have access to a wide range of tariffs and bolt-ons to cater for most voice and data needs.

***Will I have 4 separate Voicemails, one for each network?***

No you will have one single voicemail platform with an extensive range of business features

***Are there financial security measures on MultiNet to safeguard against 'bill shock'?***

To avoid bill shock and unexpected data charges when overseas and in the UK, MultiNet enables you to control expenditure with usage alerts.

***If I am travelling whilst on a call and the signal drops will it hand the call to the next network without dropping the call?***

Unfortunately, this technology does not exist, the call will drop if the signal disappears and the sim will wait for the handset to start searching for a new signal, once locked on then you can redial.

## A little history...

Established in 1986 Comm-Tech Voice & Data has thrived on its delivery of innovative communication and connectivity solutions, adding value and efficiencies to businesses across the UK.

Over the last three decades we have tailored our communications and connectivity portfolio to deliver excellence and reliability to our valued clients. Today it boast's industry leading technology to enhance any working environment, delivering 'Better Ways of Working' and significant cost savings through unified, converged and hosted telephony.

Serving business from sole traders to national government bodies, Comm-Tech delivers a completely managed communication and connectivity solution with 24/7/365 support.
